Education

Acropolis Institute of Technology and Research, Indore

August 2019 - May 2023

Bachelor of Technology in Computer Science and Engineering (CGPA of 8.10)

Madhya Pradesh, India

Technical Skills

Languages: C, C++, Python, JavaScript, SQL, Shell

Frameworks/DB: Pandas, celery, numpy, Boto3, pySpark, Flask, jQuery, Django, MongoDB, PostgreSQL, Redis

Platforms : Azure, AWS, Databricks, Git/Github, Docker

Area of Interest: Data Engineering, Machine Learning, Backend Development

Experience

Mobileum Inc.

Aug 2022 – Present

Software Engineer - 2 (Apr 2024 – Present)

Bangalore, India

- Migrated and optimized **ETLs** from the in-house tool to **Azure cloud** environment increasing the performance by **40%** handling **100,000 records/min**. Responsible for **Data Warehousing** using Azure Cloud services.
- Enhancing backend services for our product RAID, created in-house **Serverless Computing Services** embedded in the product that can be used to create independent services using **Python, importlib** and **JSON** (like **AWS Lambda**)

Software Engineer - 1 (Aug 2022 - Mar 2024)

Bangalore, India

- Wrote backend utilities for our NO-CODE platform & reduced the development time of Analytical Dashboards by **50%**.
- Created **data pipelines** using pySpark, Azure Databricks & Data Factory for our Data Analytics product.
- Developed **14 different data analytics** dashboards using **Django & jQuery** based on various telecom metrics.
- Automated various utility tasks related to data dump from different data sources using shell script & python.

Cerebry

Aug 2021 – Feb 2022

Software Development Engineer Intern

Singapore

- Led a team to create a framework to extract text from image and convert the text to LaTeX to generate questions.
- Developed backend features for generating latex to present math questions based on various parameters.

Projects

Magic (Custom ML Framework) | C Language | Source Code - Under Development

- Developing **ML framework** and custom matrix, vector, set & operations. Implemented features like **creating test-train dataset, shuffling, encoding (one-hot & Binary), Model training & dataset normalization**.
- Currently it supports **Linear & Logistic Regression**, working on integrating GNU Plot to visualize model training.

Formula 1 Analysis | PySpark, ETL Pipelines, Azure Databricks, Azure Data Factory | View Demo | Source Code

- Formula 1 Analysis is a data analysis project that performs various analyses on Race data of Formula 1 of the year 1950 - present. Wrote ETL to process the data into different layers using **Azure Data Factory**.
- Performed analysis to determine the most dominant driver, most dominant team, best lap time, best average lap time and presented the analysis in **Azure Databricks Dashboard**

Cloud On Tips | Python, Django, ORM, Celery, AWS, Flask, Boto3, jQuery | View Demo | Source Code

- A web application to create & manage **VPS & Serverless Computing Services** without having knowledge to configure it using cloud services. You can create a custom VPS, start, stop, or terminate it whenever required with a single click.
- AWS EC2 instances are being served as VPS and configured using **boto3 SDK**. This platform automates all the actions for EC2. **Serverless Computing Services are built from scratch with no use of AWS LAMBDA**.

Achievements

- **Star Performer Award** recipient at **Mobileum** for my exemplary contribution in Quarter 1 & 3 for year 2023
- Qualified for **Semi-Finals** of **FlipKart Grid 4.0** in 2022 and **Uber HackTag** in 2022
- Achieved **State Rank 1** (GOLD Medalist) in IOM 2019 in Stage 1 and **State Rank 3** in Stage 2
- Solved over **550 problems** on **Leetcode** (Username: tanishqrawat8)
- Wrote **research paper** on creating Custom Web Server in C++ & Automating ticket system via QR Ticketing System
